**TÍTULO DE LA EDICIÓN:**

“Guía de Vehículos Turismo de venta en España, con indicación de consumos y emisiones de CO<sub>2</sub>. Directiva Europea 1999/94CE. Real Decreto 837/2002”

**CONTENIDO:**

Esta Guía contiene información de consumos y emisiones de CO<sub>2</sub> de los coches nuevos disponibles en el mercado español.

Con esto se cumplimenta una de las obligaciones del Real Decreto 837/2002 de 2 de agosto (BOE núm. 185 de 3 de agosto), que incorpora al ordenamiento jurídico español la Directiva 1999/94/CE relativa a la información de consumo de combustible y emisiones de CO<sub>2</sub>, facilitada al consumidor al comercializar turismos nuevos.

En la presente edición los turismos se disponen en orden alfabético de marcas.

**AUTOR:**

La Guía ha sido elaborada por el IDAE, en colaboración con ANFAC (Asociación Española de Fabricantes de Automóviles y Camiones) y ANIACAM (Asociación Nacional de Importadores de Automóviles, Camiones, Autobuses y Motocicletas), en cumplimiento de lo dispuesto en el artículo 4 del Real Decreto 837/2002 y en el Convenio de Colaboración establecido entre dichas instituciones en el mes de marzo de 2003.

La información de marcas, modelos y versiones, cilindrada, tipo de cambio, consumos, emisiones y potencias de los turismos, ha sido facilitada por el IEA (Instituto de Estudios de la Automoción), en cooperación con ANFAC y ANIACAM.

La clasificación por consumo relativo de los turismos ha sido realizada por IDAE, con la asistencia técnica del Grupo de Motores Térmicos de la Universidad Politécnica de Madrid.

## Introducción

La presente Guía da cumplimiento a una de las obligaciones del Real Decreto 837/2002 de 2 de agosto (BOE núm. 185 de 3 de agosto), que incorpora al ordenamiento jurídico español la Directiva 1999/94/CE relativa a la información sobre el consumo de combustible y sobre las emisiones de CO<sub>2</sub> facilitada al consumidor al comercializar turismos nuevos.

La Guía contiene información de consumos y emisiones de CO<sub>2</sub> de los coches nuevos disponibles en el mercado español. Los turismos se disponen por marca en orden alfabético.

La Guía se publicará anualmente y estará a disposición de los usuarios, con carácter gratuito, en los puntos de venta de coches.

También se encuentra en [www.idae.es/coches/index.asp](http://www.idae.es/coches/index.asp)

Asimismo los usuarios podrán disponer de una Guía de consumo de combustible y emisiones de CO<sub>2</sub> de la Comisión Europea en Internet.

## Directiva 1999/94/CE

La Directiva 1999/94/CE del Parlamento Europeo y del Consejo, de 13 de diciembre de 1999, tiene por objeto informar sobre el consumo de carburante y las emisiones de CO<sub>2</sub> de los turismos nuevos, para que los futuros compradores consideren la adquisición de los coches más eficientes energéticamente.

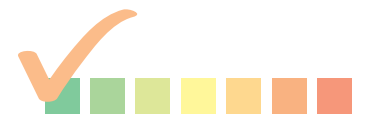

Esta Directiva establece que la información sobre el consumo oficial de carburante y las emisiones específicas oficiales de CO<sub>2</sub> de los coches nuevos se suministre a través de etiquetas, una guía, carteles e impresos de promoción, tal como se indica a continuación:

### Etiqueta

Contiene los datos oficiales de consumo y emisiones de CO<sub>2</sub> y hace referencia al modelo y tipo de carburante. Se colocará de forma visible en cada modelo de turismo o cerca del mismo en el punto de venta.

### Guía

Incluye una lista de todos los modelos de coche nuevos puestos en venta (de gasolina y gasóleo) con la información de consumo y emisiones, clasificados por marca y por orden alfabético. Además, contiene una lista de los modelos de mayor eficacia energética para

cada tipo de carburante. Estará a disposición de los usuarios, con carácter gratuito, en los puntos de venta de coches.

### **Cartel**

Se exhibirá para cada marca y para todos los modelos de coche nuevos disponibles en los puntos de venta con los datos oficiales relativos al consumo de carburante y a las emisiones de CO<sub>2</sub>, destacando los coches con menor consumo.

La Directiva 2003/73/CE, de 24 de julio, modifica el anexo III de la Directiva 1999/94/CE relativo a la descripción del cartel, añadiendo la posibilidad de exhibir en su lugar una pantalla electrónica.

### **Impresos de Promoción**

Todo el material gráfico (manuales técnicos, folletos, anuncios en periódicos, etc.), que se utiliza para la comercialización, promoción y publicidad de los vehículos, contendrá información sobre el consumo oficial de carburante y las emisiones oficiales de CO<sub>2</sub> de los coches a los que haga referencia.

La Recomendación de la Comisión, de 26 de marzo de 2003, prevé la aplicación de las disposiciones de la Directiva 1999/94/CE en lo que se refiere a impresos de promoción, a otros medios: Internet y soportes electrónicos tales como cintas de vídeo, DVD y CD-ROM.

## Real Decreto 837/2002

El Real Decreto 837/2002, de 2 de agosto, incorpora la Directiva sobre etiquetado energético al ordenamiento jurídico interno y tiene por objeto garantizar que se proporcione a los consumidores información relativa al consumo de combustible y a las emisiones de CO<sub>2</sub> de los turismos nuevos que se pongan a la venta o se ofrezcan en arrendamiento financiero en territorio español, para que los consumidores puedan elegir con fundamento.

La Orden PRE/29/2004, de 15 de enero, transpone la Directiva 2003/73/CE, incluyendo en el Anexo III del Real Decreto 837/2002 la posibilidad de exhibir una pantalla electrónica en lugar del cartel.

## Etiqueta Obligatoria

El artículo 3 del Real Decreto establece como obligatoria la colocación de una etiqueta sobre consumo de combustible y emisiones de CO<sub>2</sub> de forma claramente visible en cada modelo de turismo nuevo.

La etiqueta responde a la siguiente imagen:

En todos los puntos de venta puede obtenerse gratuitamente una guía sobre el consumo de combustible y las emisiones de CO<sub>2</sub> en la que figuran los datos de todos los modelos de automóviles de turismos nuevos.

**Marca/modelo:**

**Tipo de carburante:**

| CONSUMO OFICIAL<br>(SEGÚN LO DISPUESTO EN LA DIRECTIVA 80/1268/CEE)                                    |          |
|--|----------|
| Tipo de conducción   | l/100 km |
| En ciudad  |          |
| En carretera   |          |
| Media ponderada  |          |
| EMISIONES ESPECÍFICAS OFICIALES DE CO <sub>2</sub><br>(SEGÚN LO DISPUESTO EN LA DIRECTIVA 80/1268/CEE) |          |
| g/km   |          |

El consumo de combustible y las emisiones de CO<sub>2</sub> no sólo dependen del rendimiento del vehículo; también influyen el comportamiento al volante y otros factores no técnicos. El CO<sub>2</sub> es el principal gas de efecto invernadero responsable del calentamiento del planeta.

## Etiqueta Voluntaria

Complementariamente, con carácter voluntario, se colocará otra etiqueta que incluirá además de la información de consumo y emisiones, la clasificación por consumo comparativo del coche.

En la etiqueta voluntaria, el consumo oficial de un coche se compara con un valor medio asignado por cálculos estadísticos a los coches con igual superficie y carburante, de entre los puestos a la venta en España por todos los fabricantes. Se ha utilizado la superficie del coche (longitud x anchura) como parámetro de comparación, por así recomendarlo estudios realizados en la materia.

A esta diferencia con la media de los coches de la misma superficie, que se expresa en porcentaje, se asigna un color determinado y una letra. Resultando de este modo que los coches que consumen menos combustible que la media están clasificados como A, B, C (colores verdes), los que consumen más pertenecen a las clases E, F y G (colores rojos) y los de la clase D (color amarillo) pertenecen a la media de consumo de su categoría.

La siguiente imagen representa la clasificación según la desviación del consumo con la media:

| Desviación del consumo respecto a la media | Clasificación |
|--|---------------|
| -25 % o menos                              | A             |
| -15% a - 25%                               | B             |
| -5% a - 15%                                | C             |
| Media a +5%                                | D             |
| +5 a +15%                                  | E             |
| +15 a +25%                                 | F             |
| +25% o más                                 | G             |

Muestra de la etiqueta voluntaria:

**Eficiencia Energética**

|  |  |
|--|--|
| Marca<br>Modelo<br>Tipo Carburante<br>Transmisión  | X<br>Y<br>Gasolina<br>Manual                 |

| Comparativa de consumo<br>(con la media de los coches de su mismo tamaño a la venta en España)<br>Bajo consumo<br>-<25% A<br>-15-25% B<br>-5-15% C<br>media D<br>+5+15% E<br>+15+25% F<br>>25% G<br>Alto consumo |  |

\* En todos los puntos de venta puede obtenerse gratuitamente una guía sobre el consumo de combustible y emisiones de CO<sub>2</sub> en la que figuran los datos de todos los modelos de automóviles de turismo nuevos.  
\* El consumo de combustible y las emisiones de CO<sub>2</sub>, no sólo dependen del rendimiento del vehículo; también influyen el comportamiento al volante y otros factores no técnicos. El CO<sub>2</sub> es el principal gas de efecto invernadero responsable del calentamiento del planeta.

En esta Guía se sigue el mismo criterio utilizado en la etiqueta voluntaria para la clasificación de los coches por consumo comparativo.

## Eficiencia Energética y Emisiones de CO<sub>2</sub>

Adquiriendo coches eficientes energéticamente y utilizándolos racionalmente se contribuye a cumplir los objetivos de emisiones de CO<sub>2</sub> fijados por la Unión Europea y ratificados por España.

En la Tercera Conferencia de las Partes de la Convención Marco de las Naciones Unidas sobre el Cambio Climático, realizada en Kioto en diciembre de 1997, se establece una reducción global de las emisiones de los seis gases de efecto invernadero, responsables del calentamiento global de la atmósfera: CO<sub>2</sub> (dióxido de carbono), CH<sub>4</sub> (metano), N<sub>2</sub>O (óxido nitroso), HFC (hidrofluorocarbonos), SF<sub>6</sub> (hexafluoruro de azufre) y PFC (perfluorocarbonos), del 5,2% entre 2008 y 2012 con respecto a los valores de 1990.

El compromiso de la Unión Europea en su conjunto es el de reducir para el año 2010 las emisiones de estos gases en un 8% referido a las emisiones habidas en 1990. Por su parte, España no debe aumentar sus emisiones más de un 15% sobre el mismo año.

Asimismo, y como apoyo para alcanzar estas metas, la Asociación Europea de Fabricantes de Automóviles ACEA se ha comprometido con la Comisión Europea en reducir las emisiones de CO<sub>2</sub> de los turismos nuevos vendidos en el año 2008 en

Continúa

un 25% con respecto a 1995, lo que equivale a lograr unas emisiones de 140 g/km.

El CO<sub>2</sub> es un producto inherente a todo proceso de combustión, siendo uno de los causantes del efecto invernadero, responsable del calentamiento global de la atmósfera.

Dos terceras partes de las emisiones totales de los seis gases contemplados en el Protocolo de Kioto corresponden, en España, a las emisiones de CO<sub>2</sub> de origen energético. En el año 2002, el transporte fue responsable de un 30% de estas emisiones de CO<sub>2</sub> en el país.

Según un muestreo realizado, se estima que las emisiones de CO<sub>2</sub> de los coches nuevos vendidos en España en el año 2002 fueron de 171 g/km, como media.

El nivel real de emisión de CO<sub>2</sub> depende del rendimiento del vehículo y de su utilización. Las emisiones de este gas se reducen de manera significativa consumiendo menos combustible y, por tanto, aumentando la eficiencia energética de los viajes.

En España circulan mayoritariamente turismos a gasolina y gasóleo. Las diferencias más importantes entre estos motores están en la forma de realizar la

Continúa

mezcla del carburante con el aire y la manera de hacerla entrar en combustión.

Ninguno de los dos tipos de motores es mejor o peor que el otro, simplemente tienen características propias que hacen que su funcionamiento sea distinto. Así por ejemplo, por cada litro de gasolina que se consume, el motor emite unos 2,3<sup>1</sup> kg de CO<sub>2</sub>, lo que le permite recorrer en promedio 13,2 km, mientras que un litro de gasóleo consumido emite unos 2,6<sup>1</sup> kg de CO<sub>2</sub> para un recorrido de 16 km.

El parque nacional de turismos ha experimentado un aumento de un 43% en los últimos 10 años (1992-2002). En este periodo, el aumento del parque de turismos de gasolina no llega al 10%, mientras que el parque de gasóleo se ha más que cuadruplicado; en el año 2002, las matriculaciones de turismos de gasóleo representaron el 57% del total. A pesar de este notable incremento, el parque de turismos de gasolina sigue siendo el 68% del total.

<sup>1</sup> Estimaciones realizadas a partir de datos de coches matriculados en España en los años 2000 y 2001.

## Recomendaciones para ahorrar carburante

No sólo la compra de un coche con mejor eficiencia energética influye en su consumo. La forma en que conducimos y el mantenimiento del vehículo inciden también de forma directa en el consumo de carburante.

A continuación se presentan unas recomendaciones para reducir el consumo de combustible y de esa manera ahorrar dinero y contribuir a disminuir las emisiones de CO<sub>2</sub>.

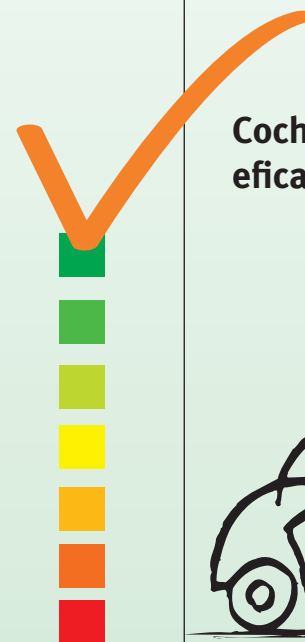

| Concepto  | Recomendación   |
|---|---|
| Ruta  | <ul style="list-style-type: none"> <li>• <b>Planifíquela y escoja el camino menos congestionado.</b></li> </ul>   |
| Trayectos cortos (menos de 3 km)                | <p>Puede llegar a consumir 20l/100km en pequeños recorridos urbanos, más del doble que en carretera.</p> <ul style="list-style-type: none"> <li>• <b>Evítelos cuando sea posible.</b></li> </ul>  |
| Sobrecarga del vehículo y accesorios exteriores | <p>Por cada 100kg de peso adicional se incrementa el consumo un 5%.<br/>El uso de la baca, aún estando vacía, o de otros accesorios exteriores, puede aumentar el consumo hasta un 35%.</p> <ul style="list-style-type: none"> <li>• <b>Evite el exceso de peso y de objetos.</b></li> </ul>            |
| Elementos eléctricos                            | <p>El uso del aire acondicionado incrementa hasta un 25% el consumo de carburante.</p> <ul style="list-style-type: none"> <li>• <b>Use los elementos eléctricos sólo cuando sean necesarios y recuerde que es aconsejable mantener la temperatura interior del coche en torno a 23-24°C.</b></li> </ul> |
| Ventilación                                     | <p>Circular con las ventanillas totalmente bajadas incrementa el consumo en un 5%.</p> <ul style="list-style-type: none"> <li>• <b>Utilice la ventilación forzada del coche en lugar de llevar las ventanillas abiertas.</b></li> </ul>   |

Continúa

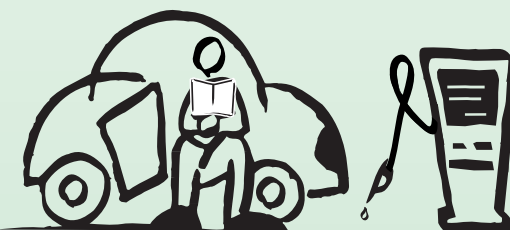

| Concepto              | Recomendación  |
|-----------------------|--|
| Neumáticos            | Una presión de neumáticos de 0,3 bares por debajo de la establecida incide en un sobreconsumo de un 3%.<br>• <b>Mantenga la presión correcta y cuide de su correcto alineado.</b>  |
| Mantenimiento         | Un motor mal reglado puede incrementar el consumo en un 9%.<br>• <b>Cambie filtros, aceite y bujías en el momento indicado, y mantenga a punto su motor.</b>   |
| Arranque              | <b>Arranque el motor sin pisar el acelerador, y utilice la primera marcha sólo para el inicio del movimiento.</b>  |
| Ralentí               | En ralentí, el coche consume entre 0,5 y 0,7 litros/hora.<br>• <b>Apague el motor durante las paradas superiores a 1 minuto.</b>   |
| Cambios de marcha     | • <b>Hacia marchas largas, cambie entre las 2.000 y 2.500 revoluciones para motor de gasolina o entre 1.500 y 2.000 para motor de gasóleo.</b><br>• <b>En el proceso de aceleración, cambie de forma rápida hacia las marchas más largas. En deceleración, haga los cambios lo más tarde posible.</b>                              |
| Velocidad             | El consumo de carburante aumenta en función de la velocidad elevada al cuadrado. Por ejemplo, un aumento de velocidad del 20% (pasar de 100 a 120km/h), implica un aumento del 44% en el consumo (de 8l/100km a 11,5l/100km).<br>• <b>Modere su velocidad, y manténgala uniforme, evitando frenazos y acelerones innecesarios.</b> |
| Ante un obstáculo     | O una reducción de velocidad de circulación, levante el pie del acelerador y deje rodar el vehículo por inercia con la marcha engranada en este instante.  |
| Conducción anticipada | • <b>Mantenga siempre una adecuada distancia de seguridad y un amplio campo de visión.</b>   |

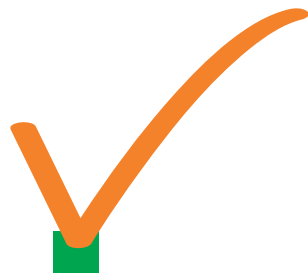

**Recuerde que...**

**¡Circulando en cualquier marcha, sin pisar el acelerador y por encima de 1.500r/min, o unos 20km/h, el consumo es nulo!** (válido para coches fabricados a partir de 1993).

**Coches de mayor eficacia energética**

### Coches de mayor eficacia energética

Los siguientes listados corresponden a coches disponibles en el mercado español, seleccionados por su menor consumo y agrupados según el tipo de combustible que utilizan.

| Marca, Modelo y Versión                       | Cilindrada (cm³) | Cambio (*) | Potencia CV (kW)      | Consumo (l / 100km) | Emisión CO <sub>2</sub> (g/km) | Clasificación Por consumo |
|---|------------------|------------|-----------------------|---------------------|--------------------------------|---------------------------|
| <b>Mayor eficacia energética - GASOLINA</b>   |                  |            |                       |                     |                                |                           |
